

Kellett Pads on Fire!

Recently Kellett Enterprises, Inc received a call from a Captain in a fire department. He indicated the department had to repair damage between the fire engine cabs and trailers on a regular basis. When these fire engines and trailers need to make sharp turns, the radius of the turn caused the engine cab to bump into the trailer causing metal fatigue and impact damage. Kellett developed a special bumper mount that was installed on the engine cab. The key feature of this bumper mount was Kellett's own custom blended neoprene, developed to the client's custom needs to create a 1 ¼" thick laminated pad. Kellett produces custom products like this bumper mount for customers every day.

Due to the large number of applications of bumpers and shock mounts, we work with your specs in order to manufacture the right pad for your application, usually at a significant savings over standard OEM (Original Equipment Manufacturers) replacement parts.

Kellett Enterprises, Inc., located in Greenville, SC, was founded in 1960 as a manufacturer and distributor of textile machinery, accessories and supplies. Today, the company's core competency is laminating various products for vibration isolation and sound reduction. Kellett is certified as a woman owner corporation by WBENC and NWBOC women's business affiliations.
