Kellett's Shake Absorber Pads Resolve Vibration Issues in Commercial Bakery Equipment

Customer Profile:

Industry type: Commercial Baking Equipment Reseller

Company name: Production Line Equipment, Inc.

When commercial baking equipment reseller, Production Line Equipment, added Kellett Enterprises' LP-13 Shake Absorber® Vibration Pad, to their product line up, we wanted to spread the word like butter over warm bread.

The LP-13 rises to the top for resolving vibration issues in this industry—so much so that now days, commercial bakery equipment made by AMF Canada doesn't even go out the door without the LP-13 Shake Absorber Pads.

That's because the best equipment can have excessive vibration. In this or any industry, that can mean false readings, reduced product quality, and even production downtime. Great pads, properly placed make all the difference.

So, Production Line Equipment was ready to make their next sell, AMF recommended the LP-13.

Our technical and sales team work with companies to determine the appropriate size pads for individual applications.

Some of the clues we gather include:

- **The number and size of feet or "legs" on the machines**
- **The weight of the machines**
- **Current RPMs**
- **Information about the floor and building structure where the machines reside**

Then the pads were custom cut based on these specifications.

Pro-active measures such as these can protect the life of commercial baking equipment for years to come.
