Vibration can cost a company THOUSANDS of dollars due to faulty readings in highly sensitive measuring equipment. The LP-13 Shake Absorber® Vibration Isolation Pads are saving companies in the meat packing industry thousands of dollars a day by simply isolating scales used to measure scrap product and making them more accurate in their measurements. Vibrations from nearby machinery, personnel simply walking by, and even the conveyors bringing material to scales for weighing, sent a multitude of vibrations resulting inaccurate readings, even through they were already using spring isolators.

Cost of installation and materials were miniscule compared to the improved cost savings in production by using the right pads for the job.

LP-13 Shake Absorber® Vibration Isolation Pads are a three-layer design with 2 custom blended neoprene sheets and a dense layer of ABS in the middle. They are widely noted for their vibration isolation properties. These pads are excellent low-frequency vibration dampers, a difficult quality to find in a load-bearing pad.

The remarkable ability of Kellett Enterprises, Inc. pads to actually de-couple machinery from floors and isolate vibration rather than simply dampening it, allows vibration control from reaching the floor by converting the vibration into heat energy and containing that energy in the pad layers. This is proof of the wide range of frequency vibrations isolated by the LP-13 Shake Absorber® Pads.

Don't let vibration rob your company of money from downtime of a machine that is shaking apart or inaccurate readings from a scale affected by machine and floor vibrations send money out the door!

Kellett Enterprises, Inc. is ready to help with its LP-13 Shake Absorber®.

Always custom cut, not custom priced. Contact us today!
